◆Recommended PCB mounting pattern

■DF12 with metal fitting

■DF12 without metal fitting

Note 1 : Refer to A299 to A304 for sides A, B, and D.

Note 2 : If the boss isn't included, the boss shown in the above figure isn't required.

Note 3 :  If the pattern is included in the shaded area, and not treated with resist, it could touch the connector contact.

## ◆Precautions for Use

### 1.Recommended Temperature Profile (SMT)

Note 1 : Maximum twice action is allowed under the same condition. However, the interval between the first and second actions must be maintained at the room temperature.

Note 2 : The temperature indicates the board surface temperature in the connector lead area.

### 2.Recommended Manual Soldering Condition (SMT)

Soldering iron temperature:  $290 \pm 10^\circ\text{C}$ , Soldering time: Within 2 seconds

### 3.Recommended Screen Thickness (SMT)

0.12mm

When the 0.15mm thickness is used, set the metal mask open area to 85% as a target.

### 4.Board Warp(SMT)

Maximum 0.02mm in the connector center area, based on both connector edges

### 5.Cleaning Condition

Refer to "Nylon Connector Use Hand book".

### 6.Cautions

- The receptacle is designed in a structure where contacts are exposed. Touching it with bare hands would cause contact failure or electrostatic element damage.
- Where no board is mounted, the insertion or extraction will cause damage or contact deformation.
- Avoid retaining the board with the connector only, and fix the board by any other means than the connector.
- Excessive scoop insertion or extraction may result in damage.
- In the manual soldering process, don't carry out the flux coating which will cause a flux blister on the connector.
- The color phase of this product may be slightly different from that of the formed product according to the manufacturing lot. However, the difference doesn't affect the performance.
